Excel Automation Tools (Best of List) - Automate Excel

Excel Automation for Non-programmers A project-based course to help you use Excel VBA where it matters... In YOUR work! Find out more here. All of that has been addressed and a few other items adjusted as well. Below is a quick video example/demo. I'm not going through the code here. My current workload doesn't allow me to. But you can go into the code when you download it and I have a few ...

How to Easily Extract From Any String Without Using VBA ...

Most of the programmers avoid writing loops this way as we have better ways for a loop. But there is no harm to learn how we can do this. Sub auto_open() Alert: If InputBox("Enter Username") <> "Puneet" Then GoTo Alert Else MsgBox "Welcome" End If End Sub. In the above example, we have used a condition statement to create a loop. We have used auto_open as the name of the macro so that whenever

VBA functions treat the function name itself as a sort of variable. So instead of using a " ... like that it is considered somewhat unidiomatic. It makes the code harder to read. VBA programmers scan for lines which assign to the function name to understand what a function does. Using the function name as a regular variable needlessly obscures this. – John Coleman Apr 4 '16 at 13:49 ...

When creating your own user interfaces within Excel, the various developer controls can add a nice touch. One such control is the date picker, which allows you (oddly enough) to pick dates. This control doesn't work with all recent versions of Excel, however. Here's the scoop.

How do I export from SAS to Excel files: Let me count the ...

Geoff has noticed that when calculating, Excel's CPU usage peaks at 50%. He wonders if there is any way to break through this barrier. He has tried setting Application.MultiThreadedCalculation.ThreadCount to various values, and has been able to bend the 50% limit out to about 58%, but there is still a large amount of untapped processing power available.
