Protein structure is the three-dimensional arrangement of atoms in an amino acid-chain molecule. Proteins are polymers - specifically polypeptides - formed from sequences of amino acids, the monomers of the polymer. A single amino acid monomer may also be called a residue indicating a repeating unit of a polymer. Proteins form by amino acids undergoing condensation reactions, in which the ...

The solution you see will be the result of optimizing numeric targets, given the choices that you make about extraction and rotation method, the number of factors to retain, etc. Suppose that you have a particular factor model in mind. For example, variables X1 to X4 load on factor 1; X5 to X8 on factor 2; X9 to X12 on factor 3. With exploratory factor analysis, you can request 3 factors and a ...

Distribution Service - Pressbox

In an exploratory factor analysis, the decision of how many factors to extract should be based on your interpretation of the underlying relationships of your variables with the latent factor. In other words, a 4 factor solution may explain more of the overall variability, but it may not generate 4 factors that make the most sense theoretically. Looking for solutions that generate less (or more ...
